

Chloramphenicol Selective Supplement (iS47015)

A selective supplement recommended for isolation of Yeasts and moulds.

Description

A sterile selective supplement is employed for the isolation of Yeast and Mould in accordance with ISO and Eur. Pharm. It involves the addition of a Chloramphenicol selective supplement to Sabouraud Agar (or PDA, Malt Extract Agar) to create a comprehensive medium suitable for the cultivation and differentiation of fungi.

Content per Vial

1 Vial for 500 ml of culture medium.

Chloramphenicol	50.0 mg
-----------------	---------

Directions

Aseptically rehydrate the contents of one vial with a 1:1 solution of ethanol and sterile distilled water (3 ml). Introduce the resulting mixture aseptically into sterile Sabouraud Dextrose Agar Base, previously cooled to 45-50°C. Ensure thorough mixing and dispense as needed.

Storage

Store in a light-protected environment at -20°C.
